DELIVERY SCHEDULE

Course: BSc in Computing in Data Centre Management
Module: Server Maintenance

Instructor: John O'Raw

Server Maintenance will be delivered in an interactive live session via Blackboard Collaborate Ultra on **Wednesday evenings from 26th September at 1830 IST (GMT+1)** normally running for around two hours but longer depending on the material we are covering.

The first part of the session is informal and is an opportunity for us to have open discussion; this is not recorded and will normally finish around 1900.

The rest of the session is broken up into segments of perhaps 30 minutes each which are recorded, with time after each segment for questions and discussion.
The recorded segments will remain on-line for the duration of the module.

Each segment is intended to cover a topic such as a lecture or practical demonstration and there will typically be 3 segments per evening.

Material relating to each session will be released on line after the session and may include video, notes and technical walk-throughs.

Students will be assigned work to do each week which cumulatively, will contribute to the assignments and technical lab records.

Please note delivery modes may vary each semester depending on the needs of the module content
